M01/M02/M03. 2009. 1.2.30. Crank fuel pump replacement. Eng. 1.2.30. Rant Digital. Fitment for the ecu's that have the issue where the stock fuel pump won't work with the ASR8/ASR20 ecu's. That is the issue that this is for. Just want to say thanks and it was very easy to put in. Add 1,299.00. Does the job. Thank you. In an automotive/transportation field, there are desires for enhancement of fuel efficiency and reduction of exhaust gas, which are caused by internal combustion engines, in order to cope with global environmental issues. As an attempt of improvement of the fuel efficiency and reduction of exhaust gas of an internal combustion engine, there is known an engine system in which various types of devices are integrated and various types of sensors are mounted. In a known example of such an engine system, for example, a sensor module including a capacitor as a sensor element is mounted on an intake port (an air intake port) of an engine, and intake air pressure and intake

air temperature are detected on the basis of a change in a capacity of the capacitor due to a change in a dielectric constant of a vacuum in the intake port as a change in a capacitance. In this manner, an air flow rate is calculated from the intake air pressure and intake air temperature. In another known example of such an engine system, for example, a sensor module including an analog capacitor as a sensor element is mounted on an intake port (an air intake port) of an engine, and an intake air pressure and intake air temperature are detected on the basis of a change in a capacity of the analog capacitor due to a change in a dielectric constant of a vacuum in the intake port as a change in a capacitance. In this manner, an air flow rate is calculated from the intake air pressure and intake air temperature. In addition, for example, a sensor module including a resonant capacitor as a sensor element is mounted on an intake port (an air intake port) of an engine, and an intake air pressure and intake air temperature are detected on the basis of a resonance frequency of the resonant capacitor. In this manner, an air flow rate is calculated from the intake air pressure and intake air temperature. In the aforementioned engine system, for example, a sensor module including a capacitor as a sensor element is used as a sensor module for detecting an intake air pressure and 82157476af
